

LAB 1 – REQUIREMENTS TABLE

Problem Statement: Blood Bank Inventory & Emergency Donor Matcher

Actors: Emergency Requester, Blood Bank Manager, Donor

1. Functional Requirements

ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall allow the emergency requester to create a blood request by entering the required blood group and number of units.	High	The request is created and a request ID is displayed.	Needed to request blood during an emergency.
FR-002	Functional	The system shall allow the blood bank manager to add and update blood stock details.	High	The updated stock quantity is displayed in the inventory.	Keeps blood stock information updated.
FR-003	Functional	The system shall check available blood stock when an emergency request is submitted.	High	The system shows whether the required blood group and quantity are available.	Helps identify available blood quickly.
FR-004	Functional	The system shall allow the blood bank manager to issue available blood units for an approved request.	High	The issued quantity is deducted from inventory.	Keeps inventory accurate.
FR-005	Functional	The system shall search for suitable donors when required blood is not available.	High	Matching available donors are displayed.	Helps find blood during emergencies.

2. Non-Functional Requirements

ID	Type	Description	Priority	Acceptance Criteria	Rationale
NFR-001	Non-Functional	The system shall display blood inventory and donor matching results within 5 seconds of a valid request.	High	The result is displayed within 5 seconds in a timing test.	Quick response is important during emergencies.
NFR-002	Non-Functional	The system shall allow only authorized users to access blood bank and donor information.	High	An unauthorized user is denied access to restricted information.	Protects donor and healthcare information.
